## GitHub User Guidebook

**Objective:** A clear, step-by-step handbook to create and access a GitHub account, upload files (text, code, images, videos), and share repositories so others can collaborate.

### Table of contents

1. Introduction
2. Create a GitHub account (step-by-step)
3. Accessing your GitHub account
4. Create a repository
5. Upload files to GitHub (text, code, images, videos)
6. Share & collaborate

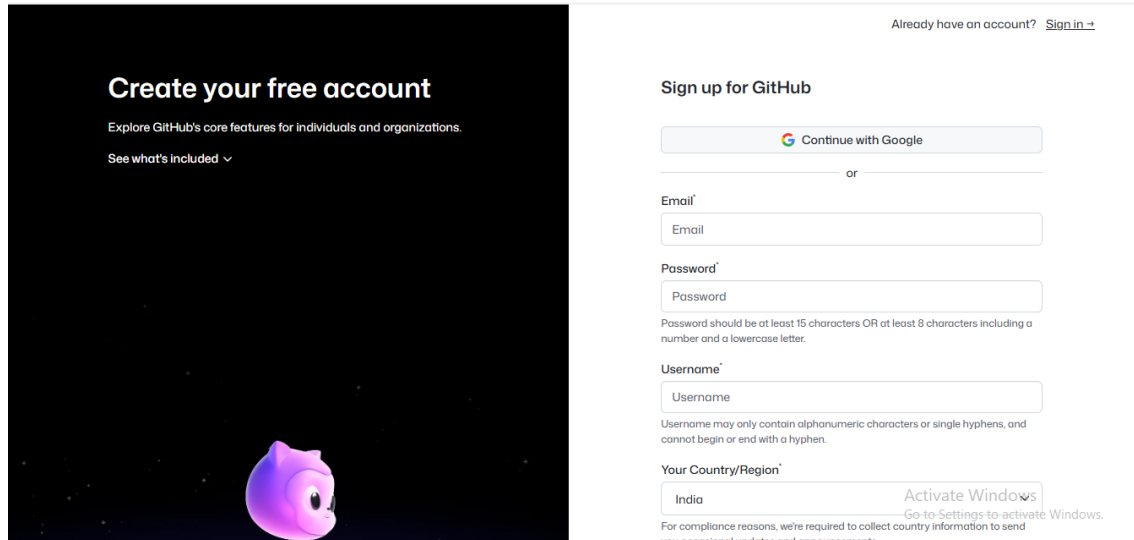

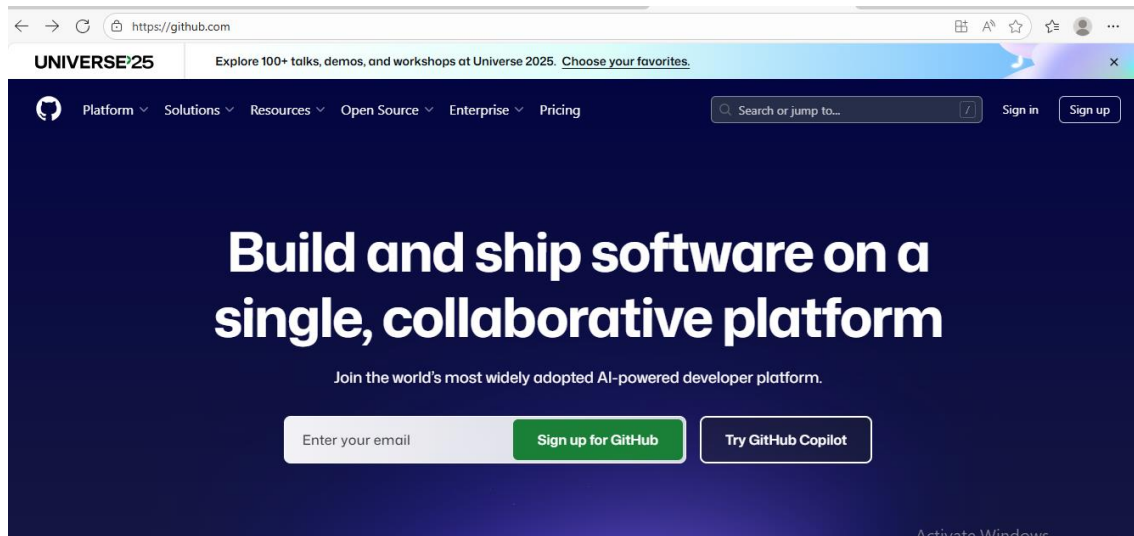

### 1. Introduction

GitHub is a cloud-based platform for managing Git repositories. It allows teams to store code, text files, images, and videos, review contributions, and collaborate effectively. This guide provides clear, step-by-step instructions for common workflows.

### 2. Create a GitHub account (step-by-step)

1. Open a browser and go to **<https://github.com>**.
2. Click **Sign up** (top-right).
3. Enter an **email address**, create a **username**, and set a **password**. Click **Continue**.
4. Follow the on-screen verification steps (captcha, email verification). Check your email and click the verification link.
5. Choose whether your account will be **Personal** or for an **Organization** (you can create an organization later).
6. (Optional) Pick a plan: Free (public & private repos), or choose a paid plan for additional features.
7. Finish the setup prompts (preferences, profile info) and you will be signed in.

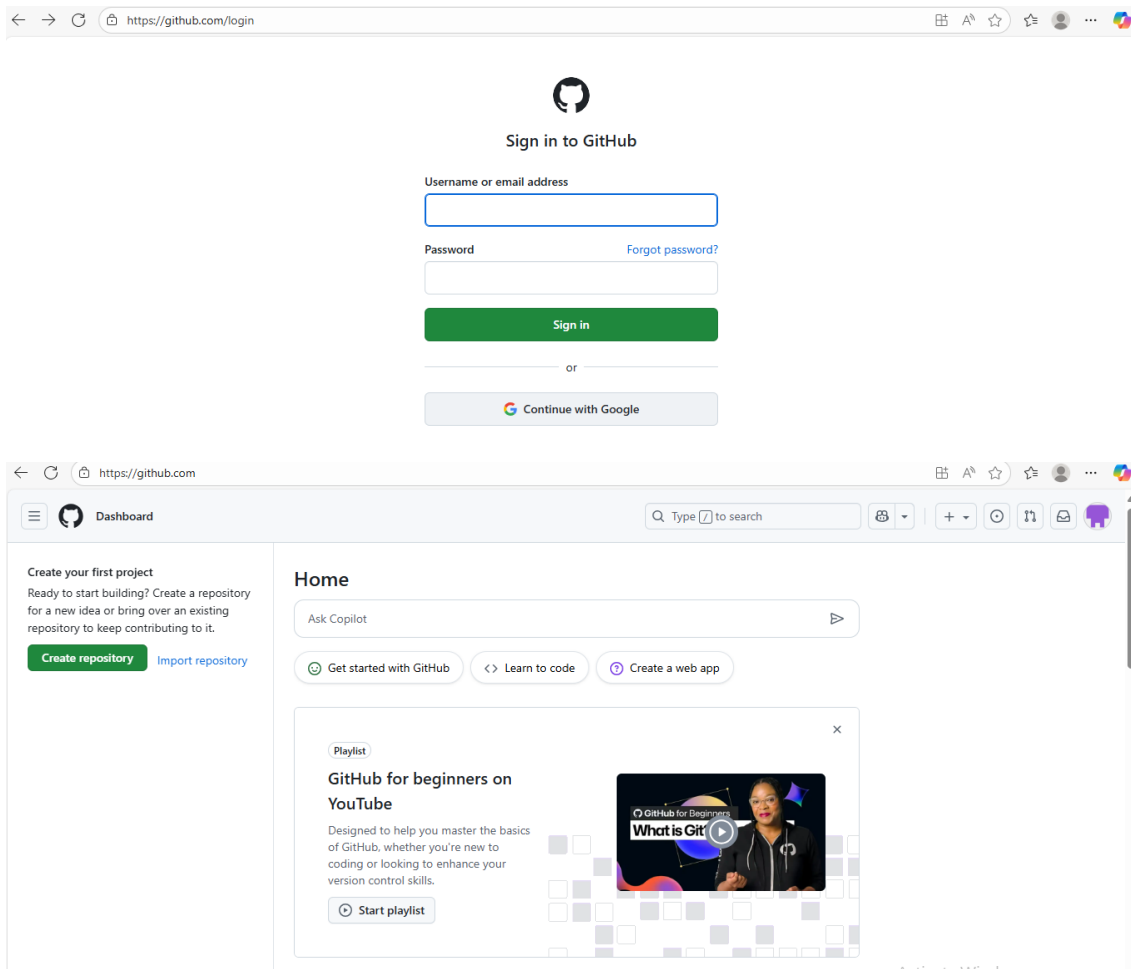

**Tip:** Your username will appear in repository URLs (e.g., <https://github.com/your-username/your-repo>).

### 3. Accessing your GitHub account

#### Web Access (browser)

1. Visit <https://github.com>.
2. Click **Sign in** (top-right).
3. Enter your username/email and password and click **Sign in**.

## 4. Create a repository

### Create via GitHub website

1. On GitHub, click + (top-Right) -> New repository.
2. Fill in Repository name.
3. Optional: add a Description.
4. Choose Public or Private.
5. Click Create repository.

## Create a new repository

Repositories contain a project's files and version history. Have a project elsewhere? [Import a repository](#).  
Required fields are marked with an asterisk (\*).

### 1 General

Owner \*  jkumarswamy1991-rgb / Repository name \* CWW-AI-Stu-data

Your new repository will be created as CWW-AI-Stu-data.

The repository name can only contain ASCII letters, digits, and the characters -, ., and \_.

Great repository names are short and memorable. How about [friendly-fishstick](#)?

Description

0 / 350 characters

### 2 Configuration

Choose visibility \* Choose who can see and commit to this repository

Public

✓ Public Anyone on the internet can see this repository. You choose who can commit.

Private You choose who can see and commit to this repository.

Add README READMEs can be used as longer descriptions. [About READMEs](#)

Add .gitignore .gitignore tells git which files not to track. [About ignoring files](#)

Add license Licenses explain how others can use your code. [About licenses](#)

No license

## 5. Upload files to GitHub (text, code, images, videos)

You can upload files via **Web UI**. Use Git LFS for large binary files.

### Using the GitHub Web UI (quick for small uploads)

1. Open your repository on GitHub.
2. Click **Upload existing files**.

Quick setup — if you've done this kind of thing before

 Set up in Desktop
 or
 

HTTPS
SSH

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

3. Drag & drop files (text, code, images, small videos) into the browser area or Choose your files.

2. Enter the filename (e.g., README.md), add content, and click Commit new file.

## Uploading images and embedding them

Add images to the repository (e.g., `images/logo.png`) and commit like any file.

Alternatively, drag & drop an image into the file editor on GitHub — GitHub stores it in the repo and provides a URL.

## Uploading videos

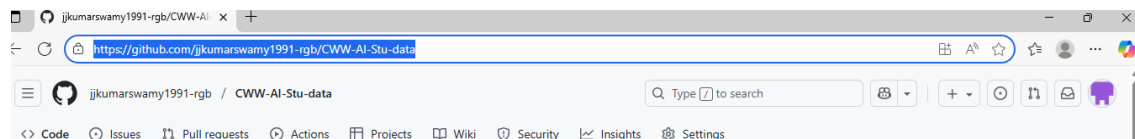

Small videos can be committed and pushed like any other file, but large videos (>100 MB) should be avoided in a standard repo.

For large media, use **Git LFS** or host externally (YouTube, Vimeo, cloud storage) and link to it.

## 6. Share & collaborate (step-by-step)

### Make your repository sharable (link)

Copy the repo URL from your browser's address bar.

### Invite collaborators (private repos)

1. Go to the repository page on GitHub.
2. Click **Settings** -> **Manage access** (left menu).
3. Click **Invite a collaborator**.
4. Enter their GitHub username or email, set the permission level, and send the invite.
